

Case study

CAA International

CAAi provides aviation safety, security and economic regulation assistance in over 140 countries.

The technical cooperation arm of the UK Civil Aviation Authority (UK CAA) has found Centrik's powerful and intuitive management to be instrumental in delivering efficient and effective operational management of a key programme of Air Operator certification support to a large-scale international National Aviation Authority (NAA).

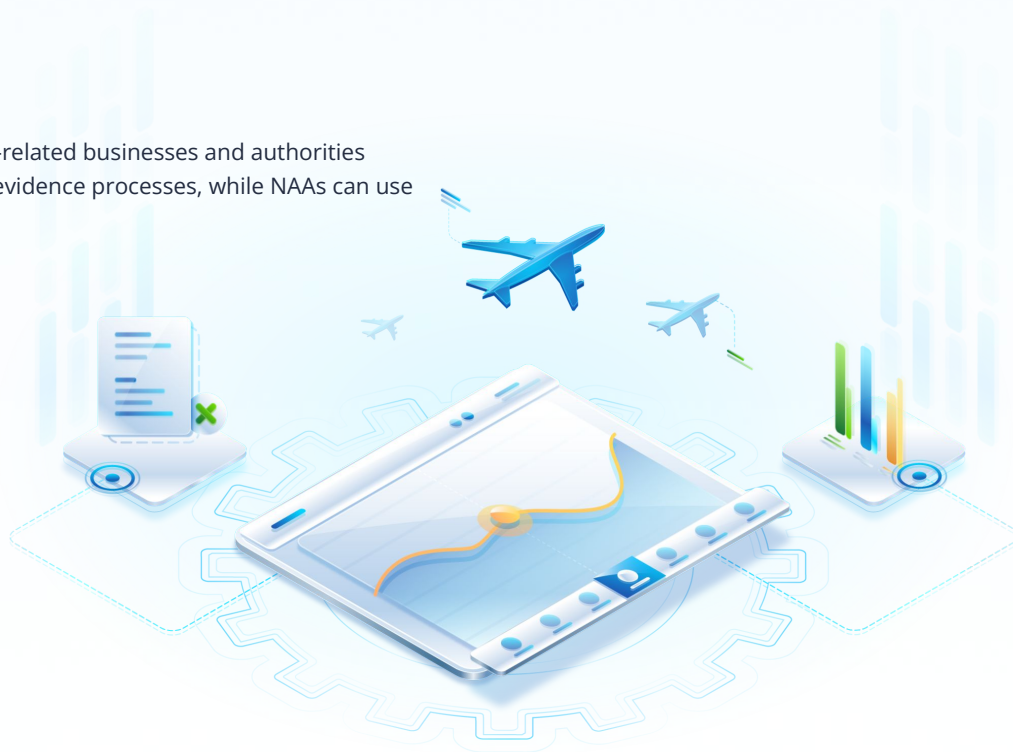

Centrik provides complete operational management for aviation-related businesses and authorities alike. Its highly configurable nature allows operators to effectively evidence processes, while NAAs can use the system to manage all elements of their jurisdiction.

"The work we are doing with this NAA has been significantly enhanced with the use of Centrik; helping to effectively manage complex processes and data, including audit and oversight findings."

Rob Erskine
Head of International Operations

"Centrik makes operational management more efficient because it brings relevant programme information and processes into one central location. It gives us a single source of truth, with a full audit trail. It's well-considered and designed, which lets us address high-stake requirements securely and easily."

"Centrik gives us a single source of truth, with a full audit trail. It's well-considered and designed, which lets us address high-stake requirements securely and easily."

Matthew Margesson
Head of International Development
